

FINISH SURVEYS
AT SAN CARLOS

Yuma, Ariz., May 18.—Project manager W. W. Schlecht, in charge of cooperative development work in Arizona, paid for jointly by the United States and state, has reported to the governor completion of topographic surveys at San Carlos and in the vicinity of Casa Grande.

On the upper Gila topographic survey, and drilling for bedrock have been completed at the Alma dam site, where good foundation rock has been found at 40 feet below stream flow. The outfit has been moved to the Had Rock site on the Gila. Some work has been started on the Boulder canyon dam site on the Colorado, but now has been suspended, awaiting the passing of the spring flood.

The flood now is starting in the upper canyon region and will be very soon, expected to reach a volume of about 30,000 second feet, possibly more. This will be much above the figures of last year, yet cause no apprehension. The levees have been strengthened and raised and are in good shape and equipment is on the ground for any necessary repairs.

HOW TO RAISE
BABY CHICKS

Put Avicol in the drinking water.

Most people lose half of every hatch and seem to expect it. Chick cholera or white diarrhoea is the trouble. The U. S. Government states that over half the chicks hatched die from this cause.

An Avicol tablet placed in the drinking water, will positively save your little chicks from all such diseases.

Inside of 48 hours the sick ones will be as lively as chickens. Avicol keeps them healthy and makes them grow and develop.

Mrs. Yarnall, Yarnall, R. F. D. 3, P. O. 10, writes: "I had 50 chicks and they all died but 22. Then I commenced Avicol and haven't lost a chick since they have grown wonderfully."

It costs nothing to try Avicol. If you find that it prevents and promptly cures white diarrhoea, chick cholera and all bowel diseases of poultry, tell us and your money will be refunded by return mail. Avicol is sold by most drugists and poultry remedy dealers, or you can send 25c or 50c today for a package by mail postpaid. Yarnall-Yarnall Co., 224 Columbia Bldg., Indianapolis, Ind.

AVICOL
stops chicks dyingRapture Kills
7,000 Annually

Seven thousand persons each year are laid waste—the fatal tortoise being "Rapture." Why? Because the "Rapture" is a disease which has been known for centuries as the high fever of the tortoise and the high fever of the tortoise.

What are you doing? Are you neglecting yourself by neglecting your tortoise? Are you neglecting your tortoise by neglecting yourself? Are you neglecting yourself by neglecting your tortoise? Are you neglecting your tortoise by neglecting yourself?

That's why you should use the PLAPAD. The PLAPAD is a medicine which is used to cure the "Rapture" in tortoises. It is a medicine which is used to cure the "Rapture" in tortoises. It is a medicine which is used to cure the "Rapture" in tortoises. It is a medicine which is used to cure the "Rapture" in tortoises.

RAISING OF RABBITS REQUIRES
LITTLE SPACE, LITTLE CAPITAL

RABBITS have always been an important source of meat in Europe, but in the United States until recently few of them were raised except during the winter business season. Conditions resulting from the great war have now awakened many Americans to the economic value of rabbits and more and more people each year are raising sufficient in their back yards to supply the family table. The flesh of the young domesticated rabbit is vastly superior in flavor to that of the wild rabbit. It closely resembles the white meat of chicken.

Rabbits are easy to handle and respond to good treatment.

A prolific 10 pound doe can easily raise in a year a yearling which at five months will produce not less than 50 pounds of delicious meat. By means of compound litters all this can be done on an area 4 by 8 feet. Half an hour of time a day, and some hay, roadside weeds, and refuse from orchards, gardens and kitchen, supplemented by a small quantity of grain, cover the cost of production. Raising rabbit meat for home consumption is a proposition for turning to account time, space, and materials which are ordinarily wasted.

Cost of Rabbit Raising. The cost of starting a rabbitry depends on its size and on the price of material. One can buy two good does and a buck of breeding age enough to supply an average family with all the rabbit meat it would care to use—for anywhere from \$1.50 to \$2.50 each, or for a total of from \$4.50 to \$5.00.

Butches may vary in cost from a few cents each, the price of an empty dry goods box, to several dollars, if expended for dressed lumber to be put together by a carpenter. On a farm where odds and ends of lumber and poultry setting usually are available, and where hay, grain, and milk are produced in abundance, the money cost of starting and carrying on a small rabbitry is negligible. In any case the initial cost need not be great. The daily cost when all feed is purchased is not usually above 1 cent for a 1 or 2 pound rabbit. A recent bulletin on rabbit raising, published by the Bureau of biological survey of the United States department of agriculture, states:

Selecting a breed is a matter of taste, although it may be influenced more or less by the market that is to be supplied. For example, the family table would demand smaller animals than would the trade of a restaurant or hotel. It is best to begin with only one breed and to concentrate on developing that into stock that may be a source of pride and profit.

One buck and two or three does are enough to start with. Young animals of breeding age are better than older ones, which will soon be past their usefulness. The buck should come from a different source from the does. It is always best to deal with reputable breeders and to examine stock before buying it.

Feeding the Rabbit. American breeders follow no uniform system of feeding rabbits. Some feed no green stuff, while others use all that is available. It is usually wise to avoid both extremes, but green feed must be used with more caution than is necessary with dry, and only the best of any kind should be used. This means particularly that spoiled, moldy, or dirty feeds are to be avoided as injurious to rabbits.

Clean oats (whole or cracked), bright well cured hay, and a small portion of some kind of greens daily is the steady diet used in most rabbitries. Crushed barley may be substituted for oats; clover or alfalfa may be used with green oats or timothy hay; and the greens may consist of carrots, rutabagas, prunings from apple and cherry trees, and plants, dock, burdock, dandelion, cauliflower, lettuce, or lawn clippings or other green grass should be clean and not fed when moldy or

Aged Man Penniless;
Sues Children for Support

Springfield, Ill., May 18.—William Sharp, 71, blind and penniless, asks "what does it get a man to raise a family of five children?" Especially when they leave you with a mere pittance for support in your old age. Because of this question, he has filed suit in the circuit court here against all of his children, alleging insufficient support. One son, Clinton, who has property valued at \$4,000, contributes but \$2 a month to his aged, infirm father. The total contributions, he declares, amount to only \$13 a month. It is not enough to live on, Mr. Sharp feebly protests in asking that his children be compelled to donate \$10 or \$20 a month to him.

Shot Cabin Companion;
Gets One-Day Sentence

Golden, Col., May 18.—C. W. Wilson is at liberty after serving 24 hours in jail here for the shooting and killing of George Turner when the pair quarreled over the spoils of an alleged "confidence game."

A nation wide search by police that had more than four years was made for Wilson following discovery of the dead body of his former companion in a mountain cabin near here. The search was fruitless, but recently Wilson voluntarily surrendered to Denver officers and was put on trial here for homicide. He claimed self defense and his plea of involuntary manslaughter was accepted by the court, who sentenced him to serve one day in jail.

-like oranges? Drink
ORANGE-CRUSH

—a strike!—a chilly thrill! Not a trout this time—but an icy swig of Ward's Orange-Crush.

—think of the joy in a bottle of Orange-Crush or Lemon-Crush pulled up from some cold, shady pool where it has been left to cool! You can forgive the fish for not biting.

—and you know what you're getting—not imitation flavors, but a blend of the delicate and luscious fruit oil pressed from sun-nurtured oranges or lemons, finest sugar and citric acid, the natural acid found in all citrus fruits.

Choose Orange-Crush or Lemon-Crush for every out-door occasion.

75-Pound Rockfish
Caught in Delaware Bay

Cape May, N. J., May 19.—A 75-pound rockfish, the largest ever caught in Delaware bay, was landed by captain Holmes and James McClellan off the Green creek clam beds. While drifting over the beds Holmes hooked what he thought was a black drum, but to the surprise of these veterans of the bay, it turned out to be a huge rockfish.

Fishermen say that flounders, croakers and weakfish will be very plentiful in the lower Delaware bay and river this year.

Mint Is Making First
Gold Coins Since 1916

San Francisco, Calif., May 18.—"The days of old, the days of gold" are to return.

For the first time since 1916 the mint here is again turning out gold coins. Eagles and double eagles are being coined, but no \$5 gold pieces.

Dear to the hearts of all Californians and all westerners, the gold coins are so familiar before the invention of paper money will again be obtainable, although it is expected the number to be turned out at the local mint will scarcely meet the demand.

El Paso Seed Co.'s 1928 Catalog now ready. Write or call for a copy.—Adv.

Divorce When Wife
Didn't Mend His Clothes

Kansas City, Mo., May 18.—The fact that a wife fails to keep the clothes of her better half mended is no grounds for a divorce.

So ruled attorney W. H. Hegnert, sitting for Judge Thomas of the district court here the other day, when August L. Hunter, a truck driver, sought to be freed from his spouse, Mrs. Annie V. Hunter.

"If failure of a wife to keep her husband's clothes mended were sufficient grounds for divorce, most any man in all probability could get one some time during his married life," Hegnert told Hunter.

"I might even get one myself."

'Boomer' Meets Fate Of
Many Other 'Railroaders'

Miami, Okla., May 18.—"Boomer," believed to be the only "railroad dog" in this state, and mascot of trainmen of the Northeastern Oklahoma line, met the fate of many other "railroaders" here the other day.

When "Boomer" attempted to jump from a flat car to the pilot of a locomotive, his feet slipped and he was ground to small pieces beneath the wheels of the engine.

The dog was buried in a neat pine coffin and a granite monument placed at the head of his grave.

Many "hunchbacks," "lunatics," "crazies" and "creakers" were present at the funeral.

How Is Your Weight?

While it is true that too much weight is not to be desired, yet the fact remains that many men and women are thin to the point of danger. This danger lies in their having no reserve force of nerve power to combat deadly diseases. A little extra flesh is needed to act as a buffer and to keep well, and this calls up the question of how best to increase the weight. The diet and the exercises of the body are the two factors of this problem. The diet is the foundation of the body, and this is usually followed by the exercises of the body. The diet is the foundation of the body, and this is usually followed by the exercises of the body.
